Global cardiopulmonary stress testing systems market is mainly driven by the rising demand for high value low volume products, and increasing innovations in the new product launches. The market is witnessing growing trend of introduction of wireless devices, and increasing awareness for early diagnosis of cardiovascular diseases is anticipated to steer the global market growth. Significant technological advancement in cardiopulmonary stress testing systems are likely to drive the market growth, and value added service assistance of these devices serves as major opportunity for the players operating in the cardiopulmonary stress testing systems space.

Scope of the Report:

This report studies the Cardiopulmonary Stress Testing Systems market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Cardiopulmonary Stress Testing Systems market by product type and applications/end industries.

The global cardiopulmonary stress testing systems market is driven by several crucial factors. Diagnosis of proper functioning of the heart remains the first line of treatment that helps physicians to assess the health status of patients who are at risk of cardiovascular diseases. A stress test helps physicians to evaluate the heart functioning based on several parameters such as blood pressure, heart rhythm, breathing, etc. and is performed typically on treadmill or cycle. For instance, stress echocardiography involves capturing ultrasound images of heart when the heart reaches peak level, which gives insights about the supply of blood and oxygen from the heart while performing an exercise. Alternately, an imaging test is conducted if the patient is unable to walk on the

treadmill or cycle or if the exercise stress test does not give satisfactory results to diagnose the cause of heart problem.

In terms of geography, the Americas led the global cardiopulmonary stress testing systems market and is projected to hold nearly 45% of the market share by 2020. The growth of this market in the Americas is attributed to the rising incidence of chronic diseases, particularly heart disorders, among people of all age groups. People with cardiovascular diseases or at high cardiovascular risk due to the presence of one or more risk factors such as hypertension and diabetes require early disease diagnosis such as CPET (cardiopulmonary stress testing). The increasing need for early diagnosis and rising awareness among the general public will lead to the growth of this market in the region.

The global Cardiopulmonary Stress Testing Systems market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.
