Abstracts

Cardiac catheterization is the insertion of a catheter into a chamber or vessel of the heart. This is done both for diagnostic and interventional purposes. Subsets of this technique are mainly coronary catheterization, involving the catheterization of the coronary arteries, and catheterization of cardiac chambers and valves of the cardiac system.

Scope of the Report:

This report focuses on the Cardiovascular Catheters in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. One of the major drivers for this market is NHS health plans and EU insurance in UK. According to a study conducted by the Nuffield Department of Population Health, British Heart Foundation Centre on Population Approaches for Non-Communicable Disease Prevention, University of Oxford, UK in 2015, around 2.3 million people had CHD of which around 1.2 million people had a stroke, one million had AF, and 480,000 had heart failure. The EU provides European Health Insurance Card (EHIC), which provides access to the people to opt for healthcare provided by the state and country. If the procedure cost is less, then the card helps the patient to avail free of cost treatment. Americas accounts for highest revenue share due to increasing number of interventional cardiovascular cases to monitor and reduce the CVDs will propel the demand for cardiovascular catheters. Additionally, the presence of reimbursement policies for cardiovascular interventional procedures and other procedures which includes heart biopsy procedures (endomyocardial biopsy), coronary angiogram, and replacement of heart valve will increase the demand for cardiovascular catheters in the market.

The worldwide market for Cardiovascular Catheters is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
