Abstracts

According to our (Global Info Research) latest study, the global Cargo Container X-ray Inspection Systems market size was valued at USD 526.8 million in 2023 and is forecast to a readjusted size of USD 384.4 million by 2030 with a CAGR of -4.4% during review period.

X-ray inspection systems for cargo containers have now become a standard feature in many ports. This rapid adoption has been accelerated by the needs of port security, but made practical by the systems' unique ability to non-destructively penetrate entire containers and generate images of the contents in just a few seconds. Even at this large scale, the resulting images are comparable to those obtained through traditional baggage scanning at airports and capable of identifying objects smaller than a baseball. Consequently, these systems are commonly employed for manifest verification and contraband interdiction in a variety of environments.

Global Cargo Container X-ray Inspection Systems key manufacturers include Nuctech, Leidos, Smiths Detection Group, etc. Global top three manufacturers hold a share of over 45%.

North America and Asia-Pacific market are likely to offer good prospects, both have a share of nearly 70%.

Base on product type, the Stationary Type segment is projected to account for the largest revenue share during the forecast period, this segment was estimated to account for about 65% of global revenue share.

In the applications, the Border Crossings segment is estimated to account for the highest sales share of close to 35 percent of the global total.
