The global Cargo Handling Crane market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Cargo handling cranes, also known as ship shore cranes or container cranes, are large machines used to load and unload cargo containers and other heavy items from ships and trucks at ports and container terminals. These cranes are typically mounted on rails or wheels and have a high gantry that can span multiple container corridors. Cargo handling cranes are designed to handle heavy objects, and some models of cranes can lift 100 tons or more. They are operated by trained crane operators who use various control devices to move the crane along rails or wheels and manipulate the crane's boom, which is equipped with a brace or twist lock to securely grasp and lift the container.
