## Abstracts

The global Carotenoid Microcapsule market size is expected to reach \$ 333 million by 2032, rising at a market growth of 7.4% CAGR during the forecast period (2026-2032).

In 2025, global carotenoid microcapsule production reached 8,879 tons, with an average selling price of USD 20 per kg, production capacity of 11.5 thousand tons, and gross margin of 34%.

Carotenoid microcapsules refer to microencapsulated products in which active carotenoids such as beta-carotene, lutein, lycopene, and astaxanthin are encapsulated using technologies such as spray drying, emulsion solidification, complex coacervation, or liposome encapsulation. The encapsulation improves stability against light, oxygen, and heat, and enhances dispersibility and bioavailability in food, feed, and dietary supplement applications. These products are typically supplied in powder or water-dispersible beadlet form and are widely used as nutritional fortification ingredients and natural colorants in functional foods and supplements.

The carotenoid microcapsule market belongs to the nutritional fortification and natural colorant microencapsulation ingredient market. Demand mainly comes from food and beverages, dietary supplements, infant formula, and feed additives. Lutein, beta-carotene, and astaxanthin microcapsules are the main product types. With the growth of functional foods, eye health products, antioxidant supplements, and the trend of replacing synthetic colorants with natural colorants, the carotenoid microcapsule market continues to grow steadily. Key industry players are mainly nutrition ingredient companies and natural colorant manufacturers, and the main technical barriers lie in microencapsulation technology, stability control, and formulation capabilities.
