According to our (Global Info Research) latest study, the global Carotenoid Microcapsule Powder market size was valued at US\$ 183 million in 2025 and is forecast to a readjusted size of US\$ 341 million by 2032 with a CAGR of 7.0% during review period.

In 2025, the global production volume of carotenoid microcapsule powder reached 8,879 tons, with an average selling price of USD 20 per kg, production capacity of 11,500 tons, and a gross margin of 34%.

Carotenoid Microcapsule Powder is a powdered product in which natural or synthetic carotenoids (such as β -carotene, lutein, zeaxanthin, lycopene, etc.) are encapsulated using microencapsulation techniques like spray drying, freeze drying, coacervation, or co-precipitation with food-grade carriers such as sugars, starch, gelatin, or gum arabic. Microencapsulation significantly enhances the stability, heat resistance, and antioxidant capacity of carotenoids, while improving solubility, dispersibility, and sensory properties, making it suitable for infant formula, functional foods, dietary supplements, beverages, and medical nutrition products.

Upstream of the carotenoid microcapsule powder industry mainly includes raw carotenoids, natural colorants, food-grade carriers, emulsifiers, and microencapsulation equipment such as spray dryers, freeze dryers, homogenizers, and automated mixing systems. The midstream segment consists of microencapsulation manufacturers, whose key barriers lie in carotenoid stability control, encapsulation efficiency optimization, particle uniformity, and compliance with food safety and nutrition standards. Downstream applications cover infant formula, functional foods and

beverages, fortified foods, dietary supplements, and medical nutrition products, with demand driven by health trends, consumer awareness of functional foods, and nutrition fortification policies.
