According to our (Global Info Research) latest study, the global Carotid Stents market size was valued at USD 1732.5 million in 2023 and is forecast to a readjusted size of USD 3211.3 million by 2030 with a CAGR of 9.2% during review period.

Carotid artery stenting is a procedure used to open a narrowed carotid artery in the heart. It involves placing a small, expandable or non-expandable tube called stent in the artery. The carotid artery stenting (CAS) procedure is also known as carotid angioplasty. Stenting helps in preventing a stroke in the long term, whereas it increases the risk of stroke and death in the short term. Carotid artery stenting is an optional procedure, which can be used if a patient has more than 60% to 70% narrowing and has low risk of serious problems from stenting. Carotid stents are available in different sizes and shapes in order to be used for patients with major heart problems. Carotid stents also feature few characteristics which makes these more useful devices for a heart surgeon. Characteristics such as visibility of stents under X-ray, scaffolding design for more effective drug elution and easier deliverability, and conformity of the stent struts to the vessel walls increase the safety and efficacy of these devices. However, new developments in stents technology are paving the way for earlier diagnosis and treatment of cardiovascular disease.

One of the major drivers for this market is Global burden of vascular diseases and stroke. The number of people affected by vascular diseases and stroke is increasing globally. CVDs are the main cause of death across the globe. The burden of CVDs is more prominent in emerging countries than in developed countries. Stroke and TIA are also prevalent globally and are responsible for a large number of deaths. The latest trend gaining momentum in the market is Increase in M&A. Companies are adopting M&A to expand their presence globally. They are also using this strategy to increase

their product portfolio and market share. This strategy empowers organizations to juxtapose innovation with R&D abilities. The trade increases the opportunities for small organizations, as the larger organizations are constantly interested in acquiring them for their development prospects. M&A remain an important option for various medical device manufacturing companies.
