Abstracts

Carrier Tape is a supplementary product for the electronic packaging industry. The tapes are mainly used as protective packages for electronic components, integrated circuits, and other devices. The tape serves as not only a package but also a protecting layer that prevents electronic devices from physical and electrostatic discharge damages during outbound shipping and inbound storage.

Carrier Tape is mainly used by electronic components such as integrated circuits, resistor, capacitor, transistor, etc. During the packaging process, electronic devices are packed in a specially designed cavity on the tape. The carrier tape is then enclosed by a top and a bottom cover tape which then stores the tape in a reel. In that way, the entire structure prevents electronic devices from being polluted during transportation and storage. When the tape arrives at factories or assembly lines, automatic machines pull out electronic devices by locating the round sprocket holes on the tape.

According to our (Global Info Research) latest study, the global Carrier Tape Materials market size was valued at USD 871.2 million in 2022 and is forecast to a readjusted size of USD 1083 million by 2029 with a CAGR of 3.2% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

3M, ZheJiang Jiemei and Advantek captured the top three revenue share spots in the Carrier Tape market in 2019. 3M dominated with 26 percent revenue share, followed by ZheJiang Jiemei and Advantek with 15.78 percent and 11.73 percent revenue share, respectively.
