According to our (Global Info Research) latest study, the global Cartilage Regeneration market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Cartilage repair and regeneration is treatment for joints which have damaged cartilage but are healthy. Cartilage is sometimes exposed to normal wear and tear which gets damaged because of an injury causing impaired function and pain. Articular cartilage injuries occur due to destruction of the cartilage like direct blow, traumatic injury and or progressive degeneration. Degeneration of the cartilage occurs due to progressive loss of structure and function of the cartilage. Cartilage gets damaged as a result of lack of blood supply to it. Early treatment of these defects with cartilage restoration or regeneration methods helps prevent development of osteoarthritis.

Regionally, North America is the leading market for cartilage repair and regeneration procedures. The rising number of road accidents, dominance of degenerative lifestyle conditions and easy availability of advanced cartilage repair and regeneration facilities have driven the North American cartilage regeneration market.
