According to our (Global Info Research) latest study, the global Carven Injection market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Carvin injection, whose official or common name is fat emulsion amino acid (17) glucose (11%) injection, is a parenteral nutrition drug. Carvin injection is mainly used for adult patients who cannot take nutrition orally or enterally due to digestive system diseases or other reasons. By providing necessary nutrients such as glucose, amino acids and fat emulsion, it helps patients maintain nitrogen balance, provide energy and maintain nutritional balance. Carvin injection provides patients with comprehensive and balanced nutritional support through intravenous infusion. Carvin injection consists of three independent chambers, each containing glucose injection, amino acid injection and fat emulsion injection. Before infusion, the peelable seal needs to be opened to mix the liquids in the three chambers evenly, and then the liquids are infused into the patient through the intravenous catheter. Because the composition and ratio of Carvin injection are carefully designed to simulate the normal nutritional intake of the human body, it is widely used in clinical practice to provide patients with safe and effective parenteral nutrition support. At the same time, the use of Carvin injection also needs to be carried out under the guidance of professional medical staff to ensure the safety of patients and the treatment effect.

As a parenteral nutrition solution, the current market development status and dynamics of Kawen injection can be summarized from the following aspects:

In recent years, with the improvement of medical level and the improvement of patients'

requirements for quality of life, the market demand for parenteral nutrition solution has continued to increase. As one of the representative products in this field, the market size of Kawen injection has also shown a steady growth trend.

In addition, with the continuous advancement of science and technology and the continuous improvement of innovation capabilities, the production technology of Kawen injection is also constantly improving and perfecting. Some companies have improved the quality and efficacy of products by introducing advanced production equipment, optimizing production processes and formulas. At the same time, the continuous emergence of some new parenteral nutrition solution products has also injected new vitality into the market. These technological advances and innovations have not only promoted the continuous development of the Kawen injection market, but also provided patients with more and better treatment options.

Secondly, with the intensification of the aging trend of the population and the continuous increase in the number of patients with chronic diseases, the market demand for parenteral nutrition solution will continue to grow. As one of the representative products in this field, the market demand for Kawen injection will continue to remain strong. At the same time, with the improvement of medical level and the improvement of patients' requirements for quality of life, personalized and customized parenteral nutrition products will gradually become a new trend in the market.

In summary, the market for Kawen injection shows a steady growth trend.
