Abstracts

The global Cascade Pump market size is expected to reach \$ 1101.8 million by 2029, rising at a market growth of 5.4% CAGR during the forecast period (2023-2029).

Cascade pumps are pumps with radial grooves (protrusions) on the periphery of the internal impeller. The centrifugal force generated by the pressure of the vortex flow and rotation on the pump's inner wall allows the pump to pump a small amount of fluid under high pressure. Cascade pumps are a type of non-displacement pumps and are also called 'vortex turbine pumps.'
