Casein hydrolysate is a commercially available substance that is used to make a minimum medium for sporulation by resuspension. It is made by digesting and acid hydrolysis of casein, a phosphoprotein found in large quantities in cow milk and cheese. Hydrolysis of casein proteins yields a mixture of all amino acids except tryptophan, which is lost throughout the process. Its main application in *Bacillus* spp. and other spore-forming species is a primary amino acid source for creating defined minimum media, particularly SM media. Casein hydrolysate is a pre-digested protein supplement that aids in digestibility and nitrogen retention. It comprises all the amino acids essential for protein synthesis.
