Abstracts

The global Casein Hydrolysate market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Casein hydrolysate is a commercially available substance that is used to make a minimum medium for sporulation by resuspension. It is made by digesting and acid hydrolysis of casein, a phosphoprotein found in large quantities in cow milk and cheese. Hydrolysis of casein proteins yields a mixture of all amino acids except tryptophan, which is lost throughout the process. Its main application in *Bacillus* spp. and other spore-forming species is a primary amino acid source for creating defined minimum media, particularly SM media. Casein hydrolysate is a pre-digested protein supplement that aids in digestibility and nitrogen retention. It comprises all the amino acids essential for protein synthesis.

This report studies the global Casein Hydrolysate production, demand, key manufacturers, and key regions.
