## Abstracts

According to our (Global Info Research) latest study, the global Cash Counter market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Cash counters are widely used by the BFSI sector to count the cash deposited in the bank by account holders or for making any kind of transactions. The machines are primarily used in places where huge money transactions are involved daily. ATM machines also have inbuilt cash counter systems to determine the amount of money or currency being deposited by customers.

With the increasing number of bank branches in emerging countries, the market for cash counters is expected to have a positive outlook over the coming years. Retail banking channels like the brick-and-mortar branches have faced the impact of digitization in the BFSI sector in developed economies, but the scenario is strikingly different in emerging economies. Banks in emerging countries like India and China are opening new branches to target the population that does not have access to banks. This is expected to increase the demand for cash counters in the APAC region over the next four years.
