Abstracts

According to our (Global Info Research) latest study, the global Caspofungin Acetate API market size was valued at US\$ 102 million in 2025 and is forecast to a readjusted size of US\$ 175 million by 2032 with a CAGR of 8.0% during review period.

Caspofungin acetate is an antifungal medication used to treat serious fungal infections. It is the active pharmaceutical ingredient (API) in the drug Caspofungin, marketed under the brand name Cancidas. The API is a semi-synthetic derivative of pneumocandin B0, a natural product from the fungus *Glarea lozoyensis*. Caspofungin acetate works by inhibiting the synthesis of glucan, a crucial component of the fungal cell wall.

Caspofungin acetate is the world's first echinocandin antifungal agent to be marketed, with good antibacterial effect and high safety. Fungal infections are a growing public health concern with increasing incidence and the emergence of drug-resistant strains. Globally, millions are affected by serious fungal diseases each year, with mortality estimates exceeding 1.5 million annually. Several factors contribute to this trend, including the rise in immunocompromised populations, expanding geographic ranges of certain fungal pathogens, and the development of resistance to antifungal medications. The unique antifungal effect of echinocandins represented by caspofungin acetate that targets the fungal cell wall and their high safety make them stand out among antifungal drugs and become important antibacterial drugs recommended in clinical guidelines, with broad market prospects.
