The cassette autoclave is a small, efficient high-pressure sterilization device. It mainly adopts the principle of high-pressure steam sterilization. The items to be sterilized are placed in a special cassette sterilization box (also called a sterilization chamber). By injecting high-temperature and high-pressure steam into the chamber, the sterilization effect is achieved in a short time. It can effectively kill various microorganisms, including bacterial spores, fungal spores, etc. It is widely used in medical, dental, laboratory and other fields.
