Cassette Type PLC Splitter is a fiber optic passive component that uses planar lightwave circuit technology to split optical signals into multiple output channels within a cassette housing. It is widely used in fiber-to-the-home networks, data centers, passive optical networks, telecom cabinets, distribution boxes, and optical communication access systems.

The industrial chain of Cassette Type PLC Splitter covers upstream components such as optical chips, fiber arrays, connectors, adapters, pigtails, cassette housings, ceramic ferrules, adhesives, and testing instruments. The midstream consists of chip bonding, fiber alignment, packaging, connector assembly, insertion loss testing, uniformity testing, reliability testing, and labeling. Downstream applications mainly include telecom operators, broadband networks, optical distribution frames, data centers, enterprise networks, and fiber access projects.

Optical communication network construction and FTTH broadband upgrading expand

the application of cassette type PLC splitters. It achieves stable optical signal distribution with compact structure and easy installation. Low-loss optical path design improves transmission efficiency in communication systems.
