Abstracts

According to our (Global Info Research) latest study, the global Cast AlNiCo Magnet market size was valued at US\$ 1197 million in 2024 and is forecast to a readjusted size of USD 2027 million by 2031 with a CAGR of 7.9% during review period.

Cast AlNiCo magnets are typically made by pouring molten aluminum, nickel, and cobalt into a mold and solidifying the alloy under high pressure. The resulting cast magnets can then be heat-treated to enhance their magnetic properties.

AlNiCo magnets have high magnetic strength but relatively low Curie temperatures compared to other types of rare-earth magnets. This means they can lose their magnetic properties at relatively low temperatures, which can limit their use in certain high-temperature applications.

It is expected that the alnico magnet market will continue to maintain steady growth in the future. The main driving factors include the recovery of the global economy, the continuous emergence of new technologies, and the increasing market demand. At the same time, the alnico magnet market is also facing some challenges, such as raw material price fluctuations, stricter environmental protection policies, etc. These factors will have a certain impact on the development of the market.
