## Abstracts

The global Cast Coated Ink Paper market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Cast-coated high-gloss photo paper is a photo paper that is rolled by a high-brightness chrome-plated hot cylinder using the cast coating method. This photo paper also has a microporous structure so it absorbs ink very quickly like RC photo paper. The gloss of this photo paper is mainly transferred from the casting cylinder, so the smoothness, temperature, pressure and other factors of the cylinder directly affect the brightness of the product.
