Abstracts

According to our (Global Info Research) latest study, the global Cast Film market size was valued at US\$ 10010 million in 2024 and is forecast to a readjusted size of USD 12380 million by 2031 with a CAGR of 3.1% during review period.

Cast film, a non-stretch, non-oriented cast film produced by melt flow quenching. There are two ways: single-layer flow and multi-layer co-extrusion flow. Unlike the blown film process, the cooling of the film with cast extrusion is highly efficient.

Cast film production involves a different process. In this case the resin is extruded through a linear die and oozes out onto large diameter chilling rollers. (Note that they may not actually be cold, but rather are much cooler than the semi-molten plastic.) Depending on the original thickness of extrusion, sometimes film is thinned to the target gauge by winding the resulting film faster than it is extruded.

Global Cast Film key players include Profol Group, Mitsui Chemicals, UFLEX, Manuli Stretch, Alpha Marathon, etc. Global top five manufacturers hold a share about 4%. China is the largest market, with a share about 35%, followed by Europe and North America, have a share over 30 percent.

In terms of product, CPP is the largest segment, with a share about 85%. And in terms of application, the largest application is Food Packaging, followed by Drug Packaging, Clothing Packaging, etc.
