Cast Iron End Suction Pump is a centrifugal pump made of cast iron material with a single suction port located at one end of the pump body and a discharge port on the top or side of the pump body. Due to its cast iron structure, it has high strength, wear resistance and corrosion resistance, and can provide reliable performance in a variety of industrial and commercial applications. The pump generates centrifugal force through the rotation of the impeller to suck in liquid and discharge it. It is widely used in water treatment, water supply, heating, ventilation and air conditioning (HVAC) systems, agricultural irrigation and general industrial processes.
