Cast Iron Safety Valve is a safety - critical device made primarily from cast iron. It is an automatic pressure - relieving valve used to protect a system (such as a boiler, pressure vessel, or pipeline) from over - pressure conditions. The valve is designed to open automatically when the pressure inside the system exceeds a preset safe limit. This allows the excess fluid (which can be a gas, a liquid, or a vapor - liquid mixture) to escape, thereby reducing the pressure and preventing potential damage or dangerous situations such as explosions or ruptures. Cast iron is chosen as the material due to its good casting properties, durability, and relatively low cost, making it suitable for many industrial and commercial applications where a reliable and cost - effective safety valve is required.
