According to our (Global Info Research) latest study, the global Carbon Fiber in Automotive market size was valued at USD 2378.5 million in 2023 and is forecast to a readjusted size of USD 4241 million by 2030 with a CAGR of 8.6% during review period.

A carbon fiber is composed of carbon atoms with about 5 to 10 micrometers in diameter. There are various advantages of using carbon fiber in automotive, which include high stiffness, high tensile strength, reduced weight, and tolerance at high temperature. These properties of carbon fiber have resulted in its increased use in the automotive industry.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
