Cast trunnion ball valve is a valve manufactured through casting processes, featuring a fixed spherical ball as its valve core. By rotating the ball, the flow of fluid can be controlled to start or stop. Cast trunnion ball valves are praised for their simple structure, excellent sealing performance, and ease of operation. The interface between the ball and the valve seat employs either a metal-to-metal hard seal or a soft seal structure, enabling them to withstand harsh conditions such as high temperatures, high pressures, and corrosion. This type of valve is widely used in pipeline systems for industries such as petroleum, chemicals, and natural gas, serving to cut off or regulate the flow of media. Cast trunnion ball valves are made from a variety of materials, including carbon steel, stainless steel, and alloy steel, to meet the conveying requirements of different media.
