## Abstracts

The global Cat and Dog Repellent market size is expected to reach \$ 10936 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032). Cat and dog repellent is a specialized medication used to prevent, treat, or eliminate internal and external parasites in dogs and cats. It works by interfering with the parasites' nervous system, energy metabolism, or developmental processes to kill them. As an essential product for pet health management, its core value lies in protecting pets from parasites such as fleas, ticks, roundworms, and heartworms, preventing malnutrition, skin diseases, and even fatal illnesses caused by them. It also reduces the risk of zoonotic parasitic diseases, ensuring public health safety.

The Cat and dog repellent supply chain consists of upstream raw material and formulation production, midstream brand product research and development and manufacturing, downstream diversified sales channels, and end-users including pet owners and medical institutions. Upstream primarily consists of manufacturers of active pharmaceutical ingredients (APIs) and excipients; midstream comprises research and manufacturing companies that process raw materials into various products such as drops, oral tablets, and injections. Downstream sales channels are increasingly diversified, including pet hospitals, clinics, offline pet stores, and rapidly growing online e-commerce platforms. Ultimately, the product reaches tens of millions of pet-owning families through professional recommendations or self-purchase.
