## Abstracts

The global Cat Probiotics market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Cat probiotics are dietary supplements designed to improve the digestive health of cats by introducing beneficial bacteria into their digestive systems. These supplements contain live microorganisms, such as *Lactobacillus acidophilus* and *Bifidobacterium lactis*, which can help to restore the natural balance of bacteria in a cat's gut. This can lead to a range of benefits, including improved digestion, stronger immune function, and better overall health.

The upstream industry chain of cat probiotics includes the production of raw materials, such as bacterial strains, as well as the development of specific formulations for use in cat probiotic supplements. Downstream, the industry chain includes the manufacturing and packaging of cat probiotic supplements, as well as their distribution and sale to consumers.

In terms of world market share, the distribution of cat probiotics is relatively evenly spread across different regions. North America and Europe are the largest markets for cat probiotics, followed by Asia-Pacific and other regions.
