## Abstracts

According to our (Global Info Research) latest study, the global Catalyst Coated Membranes market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Catalyst coated membranes (CCM) is usually as known as Membrane electrode assemblies (MEA), it is the core component of a fuel cell that helps produce the electrochemical reaction needed to separate electrons. On the anode side of the MEA, a fuel (hydrogen, methanol etc.) diffuses through the membrane and is met on the cathode end by an oxidant (oxygen or air) which bonds with the fuel and receives the electrons that were separated from the fuel. Catalysts on each side enable reactions and the membrane allows protons to pass through while keeping the gases separate. In this way cell potential is maintained and current is drawn from the cell producing electricity.

One of the most promising uses of hydrogen fuel cells is in the automotive industry. A number of major industry players, including BMW and Toyota, have already revealed plans to develop fleets of hydrogen-powered cars as the fuel source looks set to offer an additional, sustainable solution to electric power.

Electric vehicles are widely seen as a crucial way of reducing emissions and air pollution from road transport. However, accelerating uptake of electric power could risk adding pressure onto the grid, making it vital that vehicles are recharged at the right time of day.

Hydrogen fuel cells could offer an alternative. As hydrogen cars produce electricity

themselves, the vehicle doesn't receive its power from a built-in battery that needs to be charged from an external power source. Like other e-cars, hydrogen vehicles can also recover braking energy, as the electric motors convert kinetic energy back into electric energy that is fed into the back-up battery.

The Global Info Research report includes an overview of the development of the Catalyst Coated Membranes industry chain, the market status of Hydrogen Fuel Cells (3-layer CCM, 5-layer CCM), Methanol Fuel Cells (3-layer CCM, 5-layer CCM), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Catalyst Coated Membranes.
