Abstracts

A catamaran is a multi-hulled watercraft featuring two parallel hulls of equal size. It is a geometry-stabilized craft, deriving its stability from its wide beam, rather than from a ballasted keel as with a monohull sailboat. Being ballast-free and therefore lighter than a monohull, catamarans often have a shallower draft (draught) than comparably-sized monohulls. The two hulls combined also often have a smaller hydrodynamic resistance than comparable monohulls, requiring less propulsive power from either sails or motors. The catamaran's wider stance on the water can reduce both heeling and wave-induced motion, as compared with a monohull.

Catamarans range in size from small—sailing or rowing vessels—to large—naval ships and car ferries. The structure connecting a catamaran's two hulls ranges from a simple frame strung with webbing to support the crew to a bridging superstructure incorporating extensive cabin and/or cargo space.

According to our (Global Info Research) latest study, the global Catamarans market size was valued at USD 1466.2 million in 2022 and is forecast to a readjusted size of USD 1822.6 million by 2029 with a CAGR of 3.2% during review period.
