Abstracts

The catering exhaust gas monitoring platform is a system used to monitor and manage oil fume emissions in the catering industry. It collects data on the working status of oil fume purifiers, oil fume emission concentration and other data in real time through monitoring equipment installed in catering companies, and transmits these data to the cloud platform. Regulatory authorities can use these data for real-time monitoring, promptly discover and deal with excessive emissions and equipment abnormalities, and urge catering companies to carry out rectification and regular maintenance to achieve environmental protection and emission reduction purposes. This kind of platform can help improve the environmental management efficiency of the catering industry and reduce the impact of oil fumes on the environment and residents' lives.
