Abstracts

According to our (Global Info Research) latest study, the global Cath Lab Services market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Cardiac catheterization is a procedure used to diagnose and treat cardiovascular diseases (CVDs) and other related conditions. Catheterization laboratory or cath lab is an examination room equipped with diagnostic imaging equipment. Cath labs play an important role in the visualization of arteries of heart and heart chambers.

One driver in the market is rising incidence of cardiac diseases and growth of insurance providers. In the Americas, the US occupies the major market share due to the increasing incidence of CVDs. According to the CDC (2017), about 28.4 million people were diagnosed with heart diseases. About 18.6 million people visit physician offices. About 614,348 deaths were reported in the country due to cardiac diseases by CDC. According to the CDC (2015), about 610,000 deaths were caused because of CVDs in the US. Coronary heart disease was the most common cardiac disease, reporting about 375,000 deaths in the US annually. One challenge in the market is managing cath labs with multispecialties. Hybrid cath labs include the installation of various medical imaging equipment such as interventional X-ray systems, ECG devices, and other patient monitoring devices. There is a lack of qualified medical professionals in most cath labs. With the introduction of hybrid cath labs, the management of different imaging specialties is difficult. In the developing countries such as India, South Africa, and Mexico, there is a shortage of experts for handling medical specialties.
