According to our (Global Info Research) latest study, the global Catheter-Based Renal Denervation System market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Renal Denervation (RDN) is a percutaneous interventional treatment method. It mainly uses energy such as radio frequency and ultrasound to eliminate the afferent and efferent nerves in the renal artery, blocking the signal conduction between the brain and sympathetic nerves to a certain extent, thereby reducing the risk of high blood pressure. The sympathetic nerve excitability of patients with high blood pressure can achieve long-term and stable blood pressure lowering effects with one minimally invasive surgery.

Currently, the typical models of Renal Denervation (RDN) System include Recor Medical's Paradise and Medtronic's Simplicity Spyral, etc.
