Catheter testing systems are equipment specifically designed to evaluate and verify the performance of medical catheters, ensuring their safety and effectiveness in clinical applications. These systems fully test the physical properties, functional parameters and durability of catheters by simulating actual conditions in the human body. Test items typically include the tensile strength, bending performance, torsion capacity, pressure resistance, fluid dynamics and stability under different temperature and humidity conditions of the catheter. Catheter testing systems play a key role in the research and development, production and quality control of catheters, ensuring that products meet international standards and regulatory requirements.
