Abstracts

The global Catnip Oil market size is expected to reach \$ 1379 million by 2032, rising at a market growth of 5.3% CAGR during the forecast period (2026-2032).

Global catnip oil sales reached 14,770 tons in 2025, with an average price of US\$63,566 per ton.

Catnip oil is a member of the Lamiaceae family. This oil is minty-herbaceous with a sweet, woody and spicy undertone. It is classed as a middle note and blends well with citrus, herby, minty and woody oils. Catnip oil is commonly used to treat nervousness and anxiety.

The raw material supply for catnip oil is characterized by significant seasonality, labor intensity, and low yield. Major global production areas are scattered across Canada (organic), the United States, Egypt, Iran, and China. While China has a wide cultivation area, it primarily supplies the domestic pet product market, relying heavily on imports for high-purity essential oil. Raw material costs account for 50-60% of the total cost. Due to the extremely low extraction rate (only 0.3%-0.9%), approximately 110-330 kg of hay is needed to extract 1 kg of essential oil, resulting in extremely high raw material consumption. Furthermore, catnip requires precise harvesting during a specific peak blooming period (when nepetalactone content is highest), and the long land occupation period under annual or biennial cultivation methods further increases raw material costs. Labor costs account for 20-25% of total costs, as harvesting, drying, and pre-distillation processing require significant manual labor, especially given the low level of mechanization in organic farming. Processing costs also account for approximately 20-25%. While steam distillation is a mature process, yields fluctuate greatly, and distillation time needs precise control (typically 3-4 hours) to prevent thermal

degradation of nepetalactone. It's worth noting that the market is rife with adulteration with lemongrass oil and peppermint oil, or with synthetic nepetalactone masquerading as natural products. Quality control and testing costs account for 10-15%, requiring GC-MS to ensure nepetalactone content (especially the 4a?, 7?, 7a?-isomers) is within the 55-80% range and to distinguish genuine products from counterfeits. Overall, catnip oil is a mid-to-high-priced specialty essential oil with strong raw material constraints and rapidly growing market demand. Its cost structure is influenced by multiple factors, including the scale of the pet economy, the expansion of the natural insect repellent market, and the substitution process of synthetic biotechnology.
