Abstracts

The global Cattle Record Keeping Software market size is expected to reach \$ 339 million by 2032, rising at a market growth of 6.8% CAGR during the forecast period (2026-2032).

This refers to software designed specifically for managing records related to cattle farming. It helps in tracking individual animal health, breeding, vaccinations, and other crucial data for cattle management.

The market demand for cattle record keeping software is primarily driven by the accelerated large-scale and intelligent transformation of the livestock industry, stricter government regulations on food safety and animal disease traceability, and the urgent need for cost reduction and efficiency improvement among livestock farmers. As large-scale livestock enterprises expand and small and medium-sized farmers upgrade to standardized production, traditional paper or Excel ledgers can no longer meet the complex needs of precision feeding, breeding management, compliant medication use, and batch traceability. Furthermore, the decreasing cost of IoT devices, the widespread adoption of mobile internet, and the integration of AI analytics have significantly improved the software's usability and decision-making value.

This report studies the global Cattle Record Keeping Software demand, key companies, and key regions.
