According to our (Global Info Research) latest study, the global Caustic Soda Lye market size was valued at US\$ 28516 million in 2025 and is forecast to a readjusted size of US\$ 41627 million by 2032 with a CAGR of 5.2% during review period.

Caustic soda lye, also known as sodium hydroxide solution or simply caustic lye, is an aqueous solution of sodium hydroxide (NaOH). Sodium hydroxide is a strong base, and when it is dissolved in water, it forms a caustic solution. The term 'caustic' is used because the solution is highly alkaline and can cause severe chemical burns if it comes into contact with the skin.

The proportion of caustic soda produced using ion-exchange membrane technology is increasing. Currently, over 90% of the market share is from the ion-exchange membrane method.

Caustic soda is an essential raw material for the cleaning, smelting, and bleaching of industrial materials such as metals. It is also indispensable for removing impurities in the production of cathode materials, a core material for secondary batteries. It is also used to extract aluminum, a key material for lightweight materials, from crude bauxite.

Driven by the rapid growth of electric vehicles, the aluminum industry and the demand for caustic soda in EV batteries are growing rapidly. Companies such as Hanhua have already begun expansion plans for this purpose.
