The global Caustic Soda Lye market size is expected to reach \$ 41627 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

Caustic soda lye, also known as sodium hydroxide solution or simply caustic lye, is an aqueous solution of sodium hydroxide (NaOH). Sodium hydroxide is a strong base, and when it is dissolved in water, it forms a caustic solution. The term 'caustic' is used because the solution is highly alkaline and can cause severe chemical burns if it comes into contact with the skin.

The proportion of caustic soda produced using ion-exchange membrane technology is increasing. Currently, over 90% of the market share is from the ion-exchange membrane method.

Caustic soda is an essential raw material for the cleaning, smelting, and bleaching of industrial materials such as metals. It is also indispensable for removing impurities in the production of cathode materials, a core material for secondary batteries. It is also used to extract aluminum, a key material for lightweight materials, from crude bauxite.

Driven by the rapid growth of electric vehicles, the aluminum industry and the demand for caustic soda in EV batteries are growing rapidly. Companies such as Hanhua have already begun expansion plans for this purpose.

This report studies the global Caustic Soda Lye production, demand, key manufacturers, and key regions.
