A Cavity Ring-Down Spectroscopy (CRDS) analyzer is a high-precision gas analysis instrument based on CRDS technology, widely used in environmental monitoring, industrial process control, and scientific research. The device measures the rate of decay of light intensity after multiple reflections within a high-reflectivity optical cavity to determine the concentration and composition of gases. Due to its high sensitivity and non-contact measurement method, CRDS analyzers can detect trace levels of gases, making them ideal for accurate monitoring of greenhouse gases, air pollutants, and industrial emissions.
