The global CB Class Automatic Transfer Switching Equipment market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Automatic transfer switch (ATS) is a key component of any emergency or standby power system. The change-over switch is a reliable, solid, universal and compact component. Its function is to automatically switch to the standby power supply through the change-over switch in case of sudden failure or power failure of the common power supply, so that the equipment can still operate normally. The advantage of CB-level automatic transfer switch is that it can not only complete the function of automatic transfer of dual power supplies, but also have the function of short circuit current protection (can make and break).

This report studies the global CB Class Automatic Transfer Switching Equipment production, demand, key manufacturers, and key regions.
