According to our (Global Info Research) latest study, the global CBL Cracking Furnace market size was valued at US\$ 136 million in 2024 and is forecast to a readjusted size of USD 177 million by 2031 with a CAGR of 3.8% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The CBL cracking furnace is a type of cracking furnace designed and developed by China Petrochemical Corporation. It is suitable for various light and heavy raw materials from ethane to hydrogenation tail oil. For gas raw materials, four-pass furnace tubes (2-1-1-1) are generally used, and their residence time is between 0.4 and 0.8s; for liquid raw materials, highly selective two-pass furnace tubes (2-1 type, improved 2-1 type and 4-1 type, etc.) are generally used. The cracking furnace has strong raw material adaptability, flexible cracking furnace operation, high cracking selectivity, and low ethylene energy consumption.
