Abstracts

The global CBN Turning Insert market size is expected to reach \$ 3318.4 million by 2029, rising at a market growth of 4.8% CAGR during the forecast period (2023-2029).

CBN is an artificially synthesized material exceeded in hardness only by diamond, while still offering superior wear resistance to Carbide in certain applications. Turning inserts are often used for rough machining due to their larger point angle, which makes them more rigid. Inserts with a smaller point angle, such as D and V, are often used for finish machining
