According to our (Global Info Research) latest study, the global CBR Testing Machine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

CBR testing machine, also known as a California Bearing Ratio testing machine, is used to determine the strength and compaction characteristics of road subgrades and base courses. It measures the CBR value, which is a ratio between the bearing capacity of a material to that of a standard crushed stone. The machine applies a specific load on a compacted soil sample and measures the penetration resistance. This information is essential for designing and evaluating the stability of pavements and evaluating the quality of subgrade materials.
