Abstracts

The global CBR Testing Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

CBR testing machine, also known as a California Bearing Ratio testing machine, is used to determine the strength and compaction characteristics of road subgrades and base courses. It measures the CBR value, which is a ratio between the bearing capacity of a material to that of a standard crushed stone. The machine applies a specific load on a compacted soil sample and measures the penetration resistance. This information is essential for designing and evaluating the stability of pavements and evaluating the quality of subgrade materials.
