Abstracts

The global CBZ-Amino Acids market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

CBZ-amino acids are a type of amino acids protected by benzyloxycarbonyl (CBZ) amino protecting group. CBZ is an old amino protecting group discovered by Bergmann in 1932, but it is still used today. The advantages are that the preparation of reagents and the introduction of protective groups are relatively easy and N-benzyloxycarbonyl amino acids and peptides are easy to crystallize and are relatively stable. In addition, CBZ-amino acids are not easy to racemize when activated as well as they can be selectively removed by a variety of mild methods. For the introduction of benzyloxycarbonyl, CBZ-Cl is generally used. The free amino groups can be easily reacted with CBZ-Cl under alkaline conditions controlled by NaOH or NaHCO₃ to obtain N-benzyloxycarbonyl-amino acids.

This report studies the global CBZ-Amino Acids production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for CBZ-Amino Acids, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
