According to our (Global Info Research) latest study, the global CCS (Carbon Capture Sequestration) Wellhead market size was valued at US\$ 87.2 million in 2024 and is forecast to a readjusted size of USD 173 million by 2031 with a CAGR of 8.0% during review period.

CCS (Carbon Capture Sequestration) involves the capture of CO₂ emissions from industrial processes and/or burning fossil fuels in power generation. Large-scale, geological storage of CO₂ requires extensive deployment of purpose-built CO₂ injection and monitoring wells. As part of this process, wells are drilled in select locations and used as injection points for the captured carbon. The captured carbon is transported from where it was produced and injected / stored underground. As part of this innovative process, the design and manufacture of fit-for-purpose wellhead equipment is critical.
