The Cells Contact System Hot Pressing Film, or simply referred to as CCS Hot Pressing Film, is a specialized material designed for use in the manufacturing process of electronic devices, particularly in the assembly of cells or batteries within larger systems. This film is utilized in a hot pressing process, where it serves as a medium to facilitate the secure and uniform contact between individual cells or battery components.

During the hot pressing operation, the CCS Hot Pressing Film is placed between the cells or components that need to be bonded together. The film is then subjected to heat and pressure, causing it to soften and flow, filling any gaps or irregularities between the contacting surfaces. As the film cools and solidifies, it forms a strong, conductive, and often insulating bond between the cells, ensuring reliable electrical contact and structural integrity.
