Carbon capture and storage (CCS) (or carbon capture and sequestration or carbon control and sequestration) is the process of capturing waste carbon dioxide (CO₂) from large point sources, such as fossil fuel power plants, transporting it to a storage site, and depositing it where it will not enter the atmosphere, normally an underground geological formation. The aim is to prevent the release of large quantities of CO₂ into the atmosphere (from fossil fuel use in power generation and other industries). It is a potential means of mitigating the contribution of fossil fuel emissions to global warming and ocean acidification. Although CO₂ has been injected into geological formations for several decades for various purposes, including enhanced oil recovery, the long term storage of CO₂ is a relatively new concept.

Scope of the Report:

This report focuses on the CCS in Power Generation in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The over-dependence on fossil fuels and abundant supplies is considered to be one of the primary growth drivers in this market. Technological advancements and booming economies are directly dependent on the availability of energy and ever since commercial uses of oil and natural gas was discovered, the demand for fossil fuels has only increased. The available fossil fuels are expected to meet the energy demands for decades. There will be significant emissions of greenhouse gases, which will, in turn, increase the demand for carbon capture and storage systems.

During 2015, the Americas dominated the global market and accounted for the majority of the market shares. Stringent government regulations on carbon emissions coupled

with government support and incentives drive the growth of the market in this region. This market research and analysis predicts that the Americas will continue to dominate this market in the coming years as well.

The worldwide market for CCS in Power Generation is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
