CD antigens, also known as cell surface antigens of leukocytes or cluster of differentiation, are molecules originally defined as being present on the cell surface of leucocytes and recognized by specific antibody molecules, but now including some intracellular molecules and molecules present on cells other than leucocytes. They are important for immune reactions of organisms. As lymphocytes mature, they express different protein receptors on the cell surface, which can aid in determining the type and maturation stage of the cells being examined. These proteins or antigen markers are called Clusters of Differentiation.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs.
