According to our (Global Info Research) latest study, the global CDK4/6 Inhibitors market size was valued at US\$ 13470 million in 2025 and is forecast to a readjusted size of US\$ 25210 million by 2032 with a CAGR of 9.5% during review period.

CDK4/6 inhibitors are a class of targeted cancer therapies that block the activity of cyclin-dependent kinases 4 and 6 (CDK4 and CDK6), which play crucial roles in regulating the cell cycle. By inhibiting these kinases, these drugs prevent the transition from the G1 phase to the S phase of the cell cycle, effectively halting the proliferation of cancer cells.

The development of CDK4/6 inhibitors, such as palbociclib, ribociclib, and abemaciclib, has revolutionized the treatment landscape for hormone receptor-positive breast cancer, particularly in advanced stages. Their ability to effectively prolong progression-free survival when combined with endocrine therapies highlights their critical role in targeted cancer treatment. Research is now expanding to explore their efficacy in other cancers, including lung cancer and hematological malignancies, as well as investigating combination strategies with immunotherapies and other targeted agents.
