According to our (Global Info Research) latest study, the global CDU for AI Server market size was valued at US\$ 185 million in 2025 and is forecast to a readjusted size of US\$ 866 million by 2032 with a CAGR of 24.6% during review period.

Cooling distribution unit (CDU) is an essential component in liquid cooling systems. In AI servers, CDU is mainly used to manage and distribute coolant to maintain the optimal operating temperature of the equipment. CDU is connected to temperature sensors to monitor temperature changes, adjust the flow and temperature of the coolant, and ensure that the equipment operates within a safe temperature range. In addition, CDU can also help reduce energy consumption, improve the energy efficiency of the system, and has fault detection and alarm functions to promptly detect problems with the cooling system and ensure the safe operation of the system. Modern CDUs are often integrated with the data center's monitoring and management systems to achieve centralized control and more efficient cooling strategies, which is especially important in high-performance computing (HPC) and artificial intelligence (AI) servers because these systems generate a lot of heat, and good cooling management is essential to maintaining their performance and lifespan.

Upstream: The main components of a CDU include pumps, reservoirs, power supplies, control boards, and heat exchangers. Additionally, filters, flow meters, pressure transducers, and other devices are used in managing the operation of the CDU in conjunction with the Server Rack. Downstream: CDUs are primarily used in data centers.

In 2025, global sales of CDU for AI Server reached approximately 6,180 units, with an

average global market price of around US\$ 29 K/unit. Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 30% to 50%.

Fast Market Growth:

In the current landscape dominated by AI-driven applications and dense chip architectures, liquid cooling has emerged as a pivotal technology. CDU, as a key part in liquid cooling system, will benefit from the prevalence of AI and high performance computing (HPC). The CDU market is expected to experience fast growth in the coming years.

Intensified Competition:

As showing great market potential, many investors and companies have laid their attentions on the CDU market. With more and more companies will enter in the CDU industry, the whole market competition will be intensified in the coming years.

Continued Technology Innovation:

CDU include liquid-to-liquid and liquid-to-air types. Though limited in cooling capability compared with liquid-to-liquid CDUs, liquid-to-air CDUs don't require water pipes, can be installed more easily, and take less space and lower initial cost than liquid-to-liquid CDUs. While although liquid-to-liquid CDUs hold the best cooling performance of all types. They require, among others, pipes to be installed to operate with a facility's water. More research and technology innovation will be put on liquid-to-liquid CDUs by CDU manufacturers to provide high-performance CDUs for AI servers in data centers.
