Abstracts

According to our (Global Info Research) latest study, the global Cedarwood Oil market size was valued at US\$ 248 million in 2025 and is forecast to a readjusted size of US\$ 340 million by 2032 with a CAGR of 4.6% during review period.

In 2025, the global production of cedarwood oil was approximately 8,600 tons, with an average selling price of around US\$28 per kilogram. The scale of single-line production capacity varies depending on the production process and investment scale, with an average gross profit margin of approximately 15-25%. Cedarwood oil is a natural volatile oil extracted from the roots, trunks, branches, and leaves of cypress family plants using steam distillation. It is a pale yellow liquid with a strong woody aroma, and its main components are terpene compounds such as cedrol and cedrene. It is widely used in fragrances, cosmetics, insecticides, and pharmaceuticals.

The upstream core raw materials for cedarwood oil are wood from specific tree species (mainly wood chips, sawdust, and scraps from the cypress and pine families, such as Chinese cypress, North American pencil cedar, and East African cedar). Its supply is affected by forest resources, sustainable harvesting policies, and wood processing by-products. Downstream applications are extensive, mainly including the fragrance and flavor industry, the daily chemical and personal care industry, and pharmaceuticals and agriculture (a small amount is used in topical preparations and natural insecticides).
